Why Need a Website?

A Jetsite dynamic landing page website is a digital doorway to your business that works all hours for your success. Jetsite has local focus (geo located) and is a managed website that is linked to a Google Maps and local search. A website is the most reliable way to show potential customers what your business can do and is a window into your business's best solution, products and advantages. Add real time chat, reviews and posts with Google linking to allow potential customers to interact seamlessly.

If you do not have a website or one that delivers or you rely mainly on word of mouth or signs that reach less customers every year then a Jetsite is the solution and is the digital growth pathway for your business.

The change in customer feedback power means that your posts can be optionally auto published to your Jetsite website to improve relevant content that is now relied upon by almost all prospective new customers as they research a business before deciding on contacting.

95% of consumers use search to review your business before contacting
